

# Portfolio

Jackie Morris  
[jackiemorrisdesign@gmail.com](mailto:jackiemorrisdesign@gmail.com)

With over 39 years of experience, I have established myself as a professional with a strong reputation in the graphic design industry. My thorough knowledge of Adobe's InDesign, Illustrator, Photoshop and Figma, along with a firm command of Microsoft's PowerPoint and Word programs provides a well-rounded skill set, ensuring a high-quality product every time.

My many years working for high-tech companies, such as Nokia (formerly Alcatel-Lucent) and Nortel Networks, have provided me with an extensive collection of network diagrams, technical illustrations and PowerPoint presentations. As well, my four-year contract with Canada Post expanded my scope of work to include over 2,000 illustrations for their Cancel Stamp program.

In addition to these accomplishments, my diverse portfolio also includes illustrations for children's books, logo design, photo editing and complex collateral layouts. My attention to detail and ability to turn jobs around in record time makes me the best choice for all your graphic design needs.

**NOKIA**

## Evolve your railway data center network.

Put data center fabrics and OT cloud to work to transform your railway operations

## Why railways are moving operational technology to the OT cloud

Railway operators everywhere are working to expand their high-speed services, boost train capacity, enhance passenger services and improve safety and security. They are also searching for better ways to deal with disruptions caused by powerful weather events and economic shifts.

Many operators are addressing these challenges by migrating their operational technology (OT) applications and data to a segregated, on-premises cloud environment known as the OT cloud. The first wave of migration is underway and includes OT applications such as:

- PAVCS, train-to-ground broadband wireless core and other telecommunication systems
- Group communications, push-to-talk (PTT) and push-to-video (PTV)
- Next-generation computer-aided dispatch (CAD) systems
- Computer-based interlocking (IXL) and digital signaling systems
- SCADA systems

To get maximum benefit from your OT cloud, you need data centers that can provide resilient, scalable and secure connectivity for the servers that host your OT applications and data. This connectivity, interworking with the WAN, will help you use OT to create an adaptive digital rail system that uses data-driven automation to respond to new challenges with smarter decisions, greater efficiency and higher agility.

## Is your data center fabric ready for OT?

To support OT applications, your data center fabric needs to meet stringent requirements relating to availability, quality of service (QoS), security and internetworking.

**Strong resiliency and high availability**  
Communication outages can disrupt the flow of data to safety-critical OT applications and cause you to lose real-time visibility and control of your rail infrastructure. To avoid outages, your data center fabric must complement the robustness of your network backbone with high levels of resiliency and availability.

**Flexible QoS capabilities**  
Your data center fabric needs flexible QoS capabilities to meet the demands of diverse OT applications. A fabric that lets you set QoS levels by application or user class can help you control heavy usage, protect your network from microbursts of data and ensure consistent performance for OT applications.

**Seamless integration with the backbone network**  
Your data center fabric and backbone network need to interwork seamlessly to connect IoT devices and users to applications in the OT cloud. This integration is essential for supporting use cases that combine trackside infrastructure with digital assets such as SCADA and train control system applications.

**Robust network security**  
Your attack surface will grow when the data center fabric becomes part of your mission-critical railway network. Your data center fabric needs a multi-layer zero-trust security framework that can help defend your platforms and network against sophisticated cyber threats.

## data center fabric for OT cloud

Center Fabric solution provides networking that connects your OT apps to physical railway assets with five-nines availability. It also edge IT agility to fit your existing

Our solution lets you bring new levels of openness and automation to data center networking. This helps your OT teams control and accelerate the digitalization and automation of your rail operations. It also enables them to collaborate seamlessly with your data center staff to scale and adapt the fabric to meet changing OT needs while containing costs and improving efficiency.

**High availability**

- IPv6 Foundation routes
- Inter-networking security protection
- Secure sustainable HW network security

**Cutting edge IT agility**

- Kilo-based fabric management
- Intent-based automation
- Seamless integration with CMS and other IT automation ecosystems
- Linux/container-based NOS
- State-of-the-art NDK
- Digital sandbox

## A blueprint for smooth fabric-backbone interconnection

Our Data Center Fabric solution supports an interconnection blueprint that addresses the need for seamless interworking between the fabric and the IP/MPLS backbone core network. This blueprint uses a data center gateway to reliably connect physical assets across the rail system with digital assets in the OT cloud. It ensures that OT application software always delivers high performance.

With our data center gateway, you can take advantage of seamless control, data and service plane interconnection to:

- Fully automate application deployment
- Accelerate disaster recovery and preserve operational continuity
- Seamlessly connect applications with intelligent rail assets and other IoT devices
- Extend a consistent QoS policy across the data center and backbone
- Enable IoT devices to communicate with each other
- Implement comprehensive filtering rules to protect your applications against DDoS attacks.

**Nokia Data Center Fabric for adaptive digital rail**

**Fabric Services System**

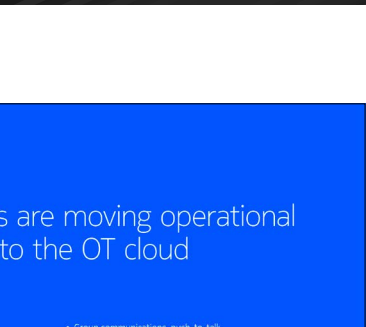

**SR Linux** Open, extensible and secure NOS

**7220 IWR and 7250 IWR**

Quickly operationalize new grid applications and resources through intent-based automation at scale

Take control with a totally open, extensible and resilient NOS with proven routing capabilities

Flexibly scale and sustainable data plane resources with a full portfolio of platforms for leaf and spine applications

## Let us help you unlock the potential of OT applications

Nokia is ready to help you harness the power of OT cloud to build an adaptive digital railway that's ready for any challenge or change. With our mission-critical communication network blueprint, you can seamlessly interconnect your backbone core network with your data center fabric to meet the demands of any OT application.

Contact us to learn more about how our Data Center Fabric solution can help you build a cloud-optimized communications platform that will empower your railway to thrive in the digital future.

# Altiplano Access Controller

## Simplify and automate your broadband network operations

Your access network is the future of your business. From a greenfield deployment to a brownfield enhancement, your network is constantly evolving. The Nokia Altiplano Access Controller provides the tools you need to easily deploy and manage your network today and grow into new broadband technologies and communication services.

As operators start deploying SDN/NFV, there is an increasing realization that a fundamental change is needed in the network management layers. Altiplano represents this next step in the evolution of fixed access management systems. Altiplano provides an SDN platform, uniquely designed for automating operations and leveraging modern cloud technologies to simplify IT and OSS integration.

## Open cloud-native approach to get to full network automation

Nokia Altiplano Access Controller is the key to the software-defined access network (SDAN). It virtualizes the intelligence of your network and centralizes it in cloud-native software applications, so that the network can be programmed and controlled through open APIs.

With an open and programmable network, you can dramatically reduce time to service (as well as time-to-market) and significantly streamline operating costs through automation.

Operators can start their network automation journey with a comprehensive suite of intent-based APIs, policy, workflow, profile and software campaign management tools to enable closed loop automation and full network lifecycle management.

## Powered by software-defined networking

### Automation and abstraction

- Simplifies network management through intent-based abstractions for optimized automation of tasks such as device deployment and subscriber fulfillment.
- Provides monitoring insights of the configurations via abstract rollout of various KPIs into health indicators.
- Automatically optimizes the network via policies, such as correcting configuration misalignments.
- Guaranteed ACID (Atomicity-Consistency-Isolation-Durability) properties for transactions.

### Programmable, modular design

- Open modular framework of scalable and reusable components.
- Full programmability of devices and capabilities through a set of open and standard interfaces.
- Fully multi-vendor capable and YANG model driven.
- Rich choice of NB protocols: Netconf, Restconf, Kafka, REST, NetLL.
- Decouples devices and service layers, which inherently reduces the risk of introducing new technologies, allowing incremental investment in new systems and services.

### Unified management

- Serves as a single management interface for your OSS/BSS.
- Provides workflows and tools to visualize, automate and optimize the network.
- OSS can perform operations that seamlessly span several network elements.
- Functions across different operational deployment models and device implementations.
- Enforce business rules independently from the underlying implementations.
- Bridge traditional and software-defined networks (PNFs and VNFs).

### Ready for the cloud era

- Cloud-native microservices solution, pre-integrated with common tool chains and IT platforms.
- Catering to all cloud deployment models and easy to migrate.
- Persistent network representation in the cloud, always in sync with connected network elements.
- Scalable data telemetry framework for network assurance processes.
- Centralized data store for easy access and back-up and restore.
- Application marketplace & SDK to meet unique business needs.

### Always-on, zero-touch provisioning

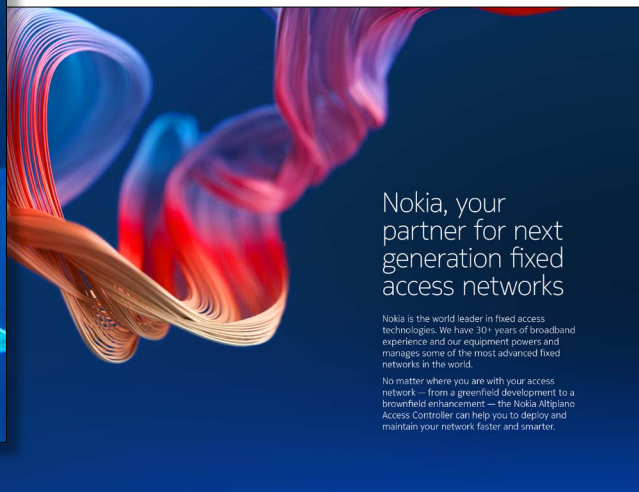

An always-on network extends the concept of high availability and ensures that network operations are always available. Altiplano provides logic and primitives that let you control and monitor hundreds of thousands of nodes. It presents a logical and abstract interface to the OSS so that it no longer needs direct access to the devices. By removing the need to manually coordinate provisioning and installation activities, a zero-touch environment is created. For example, network nodes can be fully provisioned and configuration verified, before installation. This makes installation a simple plug-and-play operation: after the node is powered up, it communicates with the cloud, loads the right software and is automatically configured. This drastically reduces the time required to install equipment and bring it into service. With an always-on network, you simplify the field operations, reduce integration time and reduce time-to-market.

### Network sharing and slicing

Altiplano has a powerful slicing engine enabling you to partition your physical network as many times as possible. Each slice can have different characteristics to cater for different services or types of traffic e.g. for Industry 4.0, smart cities or cloud gaming. A partition can also be used to deliver wholesale open access and enable sharing of network resources among virtual network operators (VNOs). The sharing includes passive cabling, equipment, and ports, with strong operational isolation and process automation, while increasing flexibility and maintaining network visibility and control for the VNOs. It offers a configurable level of control allowing VNOs to set their own service levels and provide VNO differentiation. The solution is easily scalable and lets you manage large numbers of partitions and parameters without slowing down nodes.

### Open and standardized

Nokia strongly commits to collaborating with open industry initiatives and standard bodies to increase solution interoperability. Openness at all layers speeds up the pace of innovation and avoids lengthy integration cycles. Open source has also become an integral part of Nokia's R&D process. Best-in-class IT and open-source tools were heavily used in building our solution. Altiplano adheres to the Broadband Forum's Cloud CO architecture and can easily manage 3rd party equipment in a multivendor set-up. Altiplano supports a vendor agnostic device management, for any type of equipment, whether it's traditional or SDN. This is all thanks to the flexible device modeling and powerful software plugins that allow to easily extend the platform capabilities.

## Nokia, your partner for next generation fixed access networks

Nokia is the world leader in fixed access technologies. We have 30+ years of broadband experience and our equipment powers and manages some of the most advanced fixed networks in the world.

No matter where you are with your access network — from a greenfield development to a brownfield enhancement — the Nokia Altiplano Access Controller can help you to deploy and maintain your network faster and smarter.

## Optimiser l'efficacité du traitement d'alarme et la sécurité personnelle

La solution de notification IQ Messenger est idéale pour les petites et moyennes entreprises des domaines de la santé, de l'éducation, de l'industrie à haut risque et de l'hôtellerie. Elle fournit un système d'alarme et de notification flexible, facile à installer et qui s'intègre nativement à l'Alcatel-Lucent OmniPCX® Enterprise et OXO Connect.

La solution IQ Messenger collecte et fédère les alarmes provenant de sous-systèmes hétérogènes comme par exemple des systèmes d'appels infirmière ou d'alertes incendie. Elle notifie en temps réel le personnel le plus apte à réagir à la situation en utilisant tous les systèmes de communication métier adaptés, en tenant compte de la mobilité du personnel : combinés DECT, GSM, Smartphone, console de supervision avec écran de géo localisation, etc.

IQ Messenger offre une gamme complète d'applications et d'intégrations avec les principaux acteurs du marché qui permet de proposer des usages innovants comme la notification sur appareils mobiles et l'intégration dans des applications spécifiques. Son interface web unique fédère intelligemment un écosystème client complexe et hétérogène.

Brochure  
IQ Messenger

### Avantages

- Ouverture et évolutivité : intégration avec principaux acteurs du marché pour s'adapter à des besoins spécifiques
- Protection des investissements grâce à l'intégration des systèmes existants
- Extrêmement simple à installer
- Compatibilité totale avec les protocoles et interfaces de l'industrie et les contacts secs (relais électrique, BacNet, SNMP and SMPP)
- Fonctionnalités uniques fournies de manière native et optimisée avec l'OXO Connect, les postes fixes et mobiles d'Alcatel-Lucent.
- IQ Messenger est le seul serveur de notification certifié par la FDA pour la réglementation des dispositifs médicaux.

\*La plupart des systèmes d'appel d'urgence sont compatibles ESPA/TAP

## Improve real-time situational awareness and personal safety

IQ Messenger notification solution is the perfect solution for small and medium-sized enterprises in healthcare, education, high-risk industries and the hospitality sector, as it provides a flexible, easy-to-install alarm and notification system with a native integration to the Alcatel-Lucent OmniPCX® Enterprise and Alcatel-Lucent OXO Connect.

It collects and aggregates alarms from different subsystems, such as nurse calls, fire alerts, or wander prevention systems. It notifies, in real time, the most appropriate person to respond to the situation, using industry-specific communication systems, and taking into account staff mobility; for example, with the DECT handset, GSM, smartphone, and supervision console with geolocation screen.

IQ Messenger notification solution offers a complete range of applications and integrations with the heterogeneous ecosystems of key market players, all intelligently integrated within a unique web interface. The various integrations allow innovative services, such as mobile device notifications, and specific applications integration.

### Benefits

- Openness and scalability: integration with key market players for specific needs
- Investment protection through the integration of existing systems
- Extremely simple to install and configure
- Full compatibility with industry standards, protocols and interfaces, such as ESPA/TAP\*, dry contacts (electric relays), KNX, ModBus, BacNet, SNMP and SMPP
- Unique features provided by the native and optimized integration with the Alcatel-Lucent OmniPCX Enterprise, OXO Connect, and wired and wireless sets
- IQ Messenger is the only notification server Medical Device Regulation (MDR) that is certified class 2b. This certification is mandatory for software that interact with medical devices.

\*Most nurse call and fire alarm systems are ESPA/TAP compliant

## Bessere situationsbezogene echtzeitinformationen und mehr persönliche sicherheit

Der IQ Messenger ist die perfekte Lösung für kleine und mittelständische Unternehmen im Gesundheits- und Bildungswesen sowie im Hochrisikobereich und der Hotellerie. Er bietet ein flexibles, einfach zu installierendes Alarm- und Benachrichtigungssystem mit einfacher Integration in Alcatel-Lucent OmniPCX® Enterprise und die Alcatel-Lucent OXO Connect

Der IQ Messenger sammelt und bündelt Alarme verschiedener Subsysteme (beispielsweise Pflegersysteme oder Feueralarme). Er benachrichtigt in Echtzeit die relevanteste Person durch branchenspezifische Kommunikationssysteme und berücksichtigt die Mitarbeitermobilität, z. B. mit dem DECT-Telefon, GSM, Smartphone und der Management-Konsole mit Geolokalisierungsbildschirm.

Der IQ Messenger bietet ein ganzes Sortiment an Anwendungen und Integrationen mit den heterogenen Systemen der wichtigsten Anbieter, die alle intelligent über eine Web-Schnittstelle integriert werden. Die verschiedenen Integrationen ermöglichen innovative Dienste, wie z.B. Benachrichtigungen für mobile Geräte, und die Integration spezifischer Anwendungen.

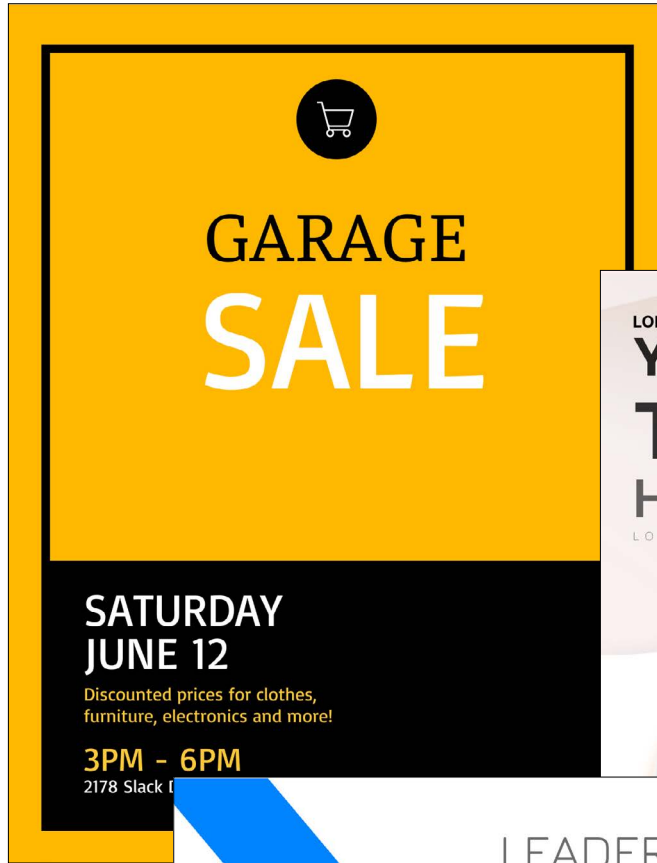

Brochure  
IQ Messenger

### Vorteile

- Offen und skalierbar: Integration in die Produkte der wichtigsten Anbieter von Speziallösungen
- Investitionsschutz durch die Integration vorhandener Systeme
- Sehr einfache Installation und Konfiguration
- Vollständige Kompatibilität mit Branchenstandards, -protokollen und -schnittstellen wie ESPA/ TAP\*, potenzialfreien Kontakten (elektrische Relais), KNX, ModBus, BacNet, SNMP und SMPP
- Einzigartige Möglichkeiten durch die native und optimierte Integration in Alcatel-Lucent OmniPCX Enterprise, in die OXO Connect und in kabelgebundene/mobile Endgeräte.
- Der IQ Messenger ist der einzige Benachrichtigungsserver, der nach der Europäischen Verordnung über Medizinprodukte (MDR) der Klasse 2b zertifiziert ist. Diese Zertifizierung ist obligatorisch für Software, die mit medizinischen Geräten interagiert.

\*Die meisten Pflegerufanlagen und Feueralarmsysteme sind ESPA/TAP-konform

A poster for a garage sale. It features a yellow background with a black shopping cart icon at the top. The text reads "GARAGE SALE" in large white letters. Below that, it says "SATURDAY JUNE 12" and "Discounted prices for clothes, furniture, electronics and more!". At the bottom, it lists "3PM - 6PM" and "2178 Slack L".

A poster featuring a cup of coffee and a tie. The text includes "LOREM IPSUM YOUR TITLE HERE" and "LOREM IPSUM" repeated three times with placeholder text. There are also four colored squares and a small "LOREM IPSUM DOLOR SIT AMET" at the bottom right.

A poster for an e-business. It has a white background with a blue diagonal stripe and a green diagonal stripe. The text reads "LEADER IN E-BUSINESS..." and "Why use us?" followed by a list of three items. Below that is "HEADLINE LOREM IPSUM" and a paragraph of placeholder text. At the bottom right, it says "LOGO CONTACT CONTACT".

## Improving the customer experience in the digital communications era

### Tackling the challenges

Organisations must adapt their customer experience strategies to meet today's digital era. They need to consider new communications methods and social media, while maintaining human interaction. Bridging the gap requires drawing from past experiences, understanding the needs of today's fast-paced customers, and leveraging new technologies such as Artificial Intelligence (AI). Overcoming the challenges of customer retention and acquisition, to improve the customer experience in the digital age is crucial.

### 1 Optimise resources and budget while delivering world-class customer service

Organisations must balance their valuable employee resources and need for self-service tools, while finding a solution that does not compromise customer satisfaction levels. Achieving this balance can result in cost savings, increased employee engagement and improved efficiency.

### 2 Make quick response and first-call resolution a priority

The customer experience hinges on two critical factors: Response time and accuracy. This involves connecting customers with the right expert and empowering front-line employees with the necessary tools to quickly solve problems. Ultimately, satisfied customers become repeat customers who promote and recommend your brand.

### 3 Onboard the entire workforce as part of a global customer service strategy

For large organisations, expanding the customer relationship role to the entire team can be challenging. Despite the benefits of having a broad range of expertise, it is essential to ensure that front-line employees can easily access the necessary support. By equipping experts with the right collaboration tools, the benefits of this approach are twofold: Delivering quality responses to customers; and fostering a more collaborative team environment for employees.

### 4 Manage multi-generational engagement preferences

Managing multiple interaction channels, including digital platforms favoured by younger generations, presents a challenge for delivering consistent high-level service. However, failing to offer these channels can limit an organisation's customer base. Embracing these engagement channels presents a significant opportunity to reach new prospects, optimise the customer journey, cross-reference information, and potentially boost business.

Alcatel-Lucent Enterprise Digital Age Communications solutions help organisations offer a next level customer experience with improved resource optimisation, and efficient employee engagement to deliver a superior customer experience. Organisations that choose to transform will be well positioned to turn their customer service centres into customer satisfaction centres.

To learn how Alcatel-Lucent Enterprise is helping organisations improve their Customer Experience, download the eBook or visit our website.

# Nokia Deepfield DDoS security solution

## Automated mitigation in <30 seconds

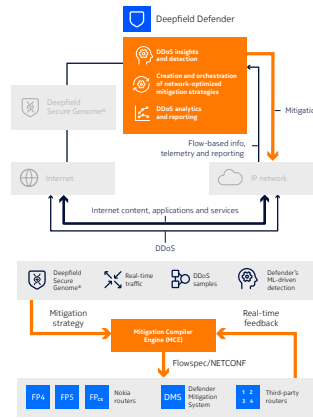

### Fast and accurate detection

**Deepfield Secure Genome®**  
 Knowledge and up-to-date visibility into billions of IPv4 and IPv6 addresses on the internet

- DDoS vectors and details
- Known/open reflectors
- Botnets
- Booter and spoofed fingerprints
- Server software
- IoT device type details

### AI/ML for network-optimized mitigation strategy

**Mitigation Compiler Engine**

- Advanced AI/ML-based system for automatic generation of optimized mitigation strategies for complex DDoS attacks
- Trained on thousands of real-world DDoS attack samples
- Effective against well-known and emerging DDoS vectors

### Network-based mitigation

**Secure-by-design: DDoS protection built into every router**

- Market-disruptive scale and speed of detection and mitigation for complex DDoS attacks (e.g., botnets)
- Terabit-speed DDoS defense
- IP silicon advantage over more expensive FPGAs

**New, purpose-built DDoS mitigation appliance**

- Industry-leading scalability and cost efficiency
- FP5-based, 2.8 Tb/s 2RU system
- Optimized OS for DDoS mitigation
- Blocks all well-known and emerging DDoS
- Field-expandable for next-generation and future attacks

## Embrace a paradigm shift in DDoS protection with Nokia Deepfield Defender

- Enable 360-degree protection for the whole network, all services and users
- Detect and mitigate all modern (e.g., botnet DDoS) and future threats and attacks in less than 30 seconds
- Automate your defense and extend your protection to many more customers
- Offer managed security services to your customers

Learn more: <https://www.nokia.com/networks/ip-networks/deepfield/defender/>

### Instant Ace Plus

The Instant Pot Ace Plus 10-in-1 blender is perfect for smoothies, soups and more. Make baby food, creamy nut butters, frozen treats, margaritas, dips, nut milks, and so much more - the possibilities are endless.

#### Tasty smoothies

This powerhouse 10-speed customizable blending paired with 26,500RPM of power makes smoothies nutritious and tasty.

#### Hot delicious soups

Instant Blenders give you thorough and even cooking with a hot heating element, unlike blade friction blenders.

#### Margaritas

Make tasty margaritas and other frozen cocktails with the Crushed Ice program.

#### Dips

Make queso, salsa, guacamole dips and more for snacks or side dishes.

#### Make creamy nut butters

With this powerhouse 26,500RPM motor the Ace Plus crushes ingredients to get a creamy consistency.

#### Healthy baby food

Make yummy baby food fast with easy one touch programs.

# ONLINE SAFETY

A NWAC Fact Sheet For  
 Parents and Caregivers of Indigenous Youth

**THE INTERNET** can be a **valuable resource for young people**, but it also comes with **risks**. **Online predators** infiltrate social media platforms that children use like **TikTok and Facebook** for manipulative and dangerous purposes. There is also a lot of readily available **misinformation** that can prevent your child from developing well-informed understandings around their health.

**It's important to monitor your child's internet use**, but we also know that parents today are busier than ever and it is not always possible to keep a close eye 24/7. Depending on the child's age, it's **also important to respect their privacy and build healthy and trusting relationships** where they can share with you if they are confused or concerned about something happening to them online.

**Indigenous kids**, especially those living in rural or remote areas, **may be more vulnerable to online manipulation** due to their desire to connect and find community where they can. No matter what their age, **it's always important to keep the conversation about online safety open and to be non-judgmental!**

## BASIC ONLINE SAFETY GUIDELINES TO DISCUSS WITH YOUR CHILD:

- Turn your location settings off.
- Never share personal information (e.g., address, phone number, school name).
- Never share passwords with anyone except with parents/guardians.
- Never agree to meet someone you've met online without your parents' knowledge and approval.
- Never respond to a threatening email, post, or message.
- Always tell a parent or trusted adult about any communication that has upset you.

## BASIC PARENTAL SUPERVISION GUIDELINES:

- Spend time online together to teach your child appropriate online behaviour.
- Stay up to date on the newest apps and trends in kids' lives.
- Monitor time spent on tablets or smartphones (e.g., only allowing computer use in a common room).
- Be aware of any unfamiliar account charges on your credit card or phone bills.
- Take your children seriously if they mention an uncomfortable online exchange.

## WARNING SIGNS THAT YOUR CHILD IS BEING TARGETED:

- Withdraws or seems distant while spending long hours online, particularly at night or when there is no supervision.
- Receives phone calls from individuals you don't know.
- Has new clothes or gifts that you don't recognize.
- Shuts off the computer or phone when you walk in.

## WARNING SIGNS THAT YOUR CHILD IS BEING TARGETED:

- 1) Be aware that online child sexual exploitation is a problem.
- 2) Talk to your kids openly and regularly. Help them feel comfortable turning to you if they experience issues online.
- 3) Look for warning signs.
- 4) Get help if needed by visiting [cybertip.ca](http://cybertip.ca).

### ARE YOU LOOKING FOR A FUN WAY TO GET INVOLVED IN YOUR COMMUNITY?

Do you love music? Do you have a few hours of time to spare in March into April '23? Do you enjoy working with other professional musicians and young people? Would you like to contribute to the success of next year's National Capital Region Music Festival and the development of our young musicians? Then this opportunity is for YOU! (No musical training or experience required.)

We are eagerly seeking individuals like you to work as Adjudicator Assistants and Front of House volunteers (greeters and ticket takers) for our upcoming Festival that will take place at various venues across Ottawa from March 27 to April 30, 2023.

**WE ARE EXCITED TO ONCE AGAIN HOLD LIVE PERFORMANCES FOLLOWING THREE YEARS OF VIRTUAL FESTIVALS!**

**WHAT YOU WOULD DO:**

**ADJUDICATOR ASSISTANT VOLUNTEERS:**

- Sitting with the Adjudicator, you manage the paperwork for each class, 3-hour shifts
- Collect the music from the participants as they arrive to give to the adjudicator
- Welcome the audience and introduce the adjudicator
- Full training will be given - no musical training/experience required

**FRONT OF HOUSE VOLUNTEERS (GREETERS/TICKET TAKERS):**

- Sitting at the door, greeting performers and audience members as they arrive, 4-hr. shifts
- Ensure that everyone goes where they need to be
- Manage sale of tickets (Trophy and Ensemble Classes), cash and with Square credit/debit
- Full training will be given - no musical training/experience required

If this sounds great to you, contact Kim Chadsey ([kim@okmf.ca](mailto:kim@okmf.ca)) for more information and to start volunteering with the Festival.

### Nokia Scene Analytics Competitive battlecard

#### ELEVATOR PITCH

The Internet of Things (IoT) is transforming how businesses operate—whether it's offering new services, enabling new business models, providing a safer environment, optimizing Industry 4.0, providing insights, or making decisions on behalf of people. Network-connected cameras are one of the largest producers of IoT data, and they have the potential to be one of the most insightful—if we can extract analytics about the scenes the cameras are supervising. Furthermore, as the cost of the cameras goes down, their ubiquity goes up—and prioritizing which scenes/events are needed for human review is a big challenge.

This is precisely the challenge that Nokia Scene Analytics is trying to address. Scene Analytics uses computer vision (CV) technology and machine learning (ML) techniques to determine scenes of interest and produce insight about the scene. Some of these algorithms work in real time to provide situational intelligence to a scene. Some of the algorithms work periodically to provide business.

#### Key differentiators of Scene Analytics:

- Providing high **flexibility to the deployment** of the video analytics processing
- Providing Nokia-specific algorithms (such as motion anomaly detection developed by **Nokia Bell Labs and Nokia data scientists**)
- Providing a flexible environment to **add more streaming algorithms** based on industry need.
- Enabling **"sensor fusion"** whereby data from other IoT sensors can be combined with

#### SOLUTION OVERVIEW

##### KEY CAPABILITIES

- Rich user interface for visualization, management and consumption of scene data
- Real-time alerting using pipeline of Machine-learning algorithms
- Monitoring of scenes from cameras and additional IoT sensors
- Business intelligence capabilities that provide further forensics such as : object detection, advance vehicle analytics and face re-identification and OCR reader for container ID
- Reduction of video stream and human review costs
- Open APIs for building applications and external analytics

##### SOLUTION DETAILS

- Integrates with almost every IP camera
- Flexible edge or cloud deployments
- Multi-tenant and High Availability
- Out-of-the-box integration with Milestone Video Management System
- Add custom algorithms (BYOA) using your Data Science team or use Nokia's Professional Services/Data Science.

#### COMPETITIVE POSITIONING AND ENTRY POINTS

##### HOW TO BEST POSITION AGAINST TYPICAL COMPETITORS

##### EXISTING CAMERA SURVEILLANCE VENDORS

- ✓ Focus on avoiding 24 X 7 surveillance and focus on finding anomalies.
- ✓ Video analytics focus on industry needs. Nokia has fewer algorithms, but our technology enables us to drop algorithms in post deployment or a needs arise.
- ✓ Video analytics part of a larger industry solution with a number of proof point in the market.

##### CLOUD IOT & VIDEO ANALYTICS PLATFORM (E.G. AWS, GOOGLE, AZURE)

- ✓ Not usable for teams with limited development team since no app actually exists; needs to be built from scratch

- ✓ Minimal on-premise support, Nokia provides both cloud and on premise support.
- ✓ Limited ability to request platform features

##### POINT-BASED MACHINE LEARNING SOLUTIONS (E.G. "I DO LICENSE PLATE RECOGNITION ONLY")

- ✓ Requires huge compute for every algorithm & use case.
- ✓ Combining algorithms back-to-back is more compute efficient

##### ENTRY POINTS - WHERE TO START?

- ✓ Target industries include: Manufacturing, Transportation (Railways and ports), Smart Cities and Utilities
- ✓ Use case examples: Industrial safety, quality and security, Safe roadways and tunnels, Rail crossings and Ports
- ✓ Scene Analytics as trigger for optimization, algorithms make assumption about condition based on averaging data provided.
- ✓ Monitors conditions looks for anomalies, looking for change of state.
- ✓ Detect deviation that should
